

Grease may be
tasty in the pan...

...but it's **nasty**
down the drain!

PUT FATS AND OILS IN THE TRASH—NEVER DOWN THE DRAIN!

Oil or grease can create expensive clogs in your plumbing and your public waste water system. That's why we urge all customers: **never pour anything down the drain that contains fats, oils or solids!**

Instead, **pour the grease** from your pans into an **empty tin can**. When it's full, **throw it away in the trash!**

You can remove even more grease by wiping down your pans with paper towels and throwing them in the trash.

Greater Augusta Utility District

Water | Wastewater | Stormwater

GreaterAugustaUtilityDistrict.com

Commercial customers: *All food service establishments are required to submit a Grease Trap/Interceptor Application to the District.*

For complete details on requirements, penalties and fees, visit the **Waste/Stormwater section** of our website and click on **Grease Trap Standards**.
